PROJECTS

Attendance Tracker using Facial Recognition

= 07/2022 - 12/2022

Key Skills: Machine Learning, Computer Vision

- Designed and developed an attendance tracker project using Python, incorporating machine learning and computer vision technique
- Utilized the face_recognition and dlib libraries to implement facial recognition capabilities for accurate identification and tracking of individuals.
- Implemented an automated attendance logging system that records attendance data into an Excel sheet, improving efficiency and eliminating the need for manual tracking.

Gas Quality Detection using Arduino

iii 01/2023 - 06/2023

Key Skills: IOT, Arduino

- Successfully developed and implemented an loT project focused on gas quality detection, utilizing Arduino and MQ-2 sensor technology.
- Integrated a piezo buzzer component to provide audible alerts in real-time, ensuring timely detection and response to potential gas quality issues.

Bus Ticket Reservation Bot

= 09/2022 - 12/2022

Key Skills: RPA, Data Scraping

- Developed and implemented a UI Path RPA project for automating the process of booking bus tickets.
- Integrated an email feature to provide users with detailed information on the best ticket options.
- Improved efficiency by reducing manual effort and enabling users to book tickets directly through the automated system.
